

Dear Valued Partner,

Welcome to Circulate 360, the new newsletter from Torin-Sifan. Having met with so many customers over the past months to present our exciting plans for 2015, I felt that a newsletter was a good way of keeping you fully up to date with our progress and also our future initiatives.

This edition focusses specifically on the opening of our new EC Manufacturing & Technology Centre in the UK. The opening of our new facility in 2014 was a historic moment for Torin-Sifan as we also celebrated 50 years of successful trading in 2014. Our new facility will provide us with the platform to significantly increase our production volume in the continually growing area of EC Technology based Fans and motors.

The Torin-Sifan team will be in contact early 2015 to arrange appointments to present in detail several new EC product ranges and we would be delighted to welcome and demonstrate to you our new EC Manufacturing & Technology facility.

As always, if you have any questions, please do not hesitate to contact me directly and I look forward to meeting with you during what I expect will be a very exciting 2015 for Torin-Sifan and our partners.

Finally, I would like to wish to a very Happy and Prosperous New Year!

Our New EC Manufacturing & Technology Centre Is Open!

We are pleased to announce that the new Torin-Sifan EC Manufacturing & Technology Centre became fully operational from 1st September 2014!

All Torin-Sifan Brushless DC & EC product ranges are now manufactured at our new facility across five newly designed production lines. The facility has a further three production lines being designed and implemented to support the manufacture of several new EC motor based product platforms that are targeted towards applications in the HVAC sector,

both Residential & Commercial. The new products will be available early in 2015 with more details to follow.

The new facility supports the need for increased production capacity to meet with the significant and consistent growth in demand for EC Technology due to the need to reduce energy consumption, offer more precise controllability as well as improving airflow capability quietly as driven by numerous legislations.

The new facility has also adopted lean manufacturing techniques to help optimise both our quality and service performance and Torin-Sifan is committed to developing innovative products that meet & exceed the requirements of emerging legislation and customer preferences, as well as continuing to invest in people, processes, equipment & technology.

In addition to the manufacturing space, the facility has impressive meeting room facilities. We would like to encourage all of our customers to come and visit the new site. In addition we would be happy to host any of our customers who wish to hold their internal meetings in the Swindon area and would like to hold the meeting somewhere of interest with good support. Please **contact me** here.

The facility will be officially opened in February 2015 by a member of the UK Parliament and we look forward to continuing to build excellent relationships with both our existing & new customers in the area of EC Technology in 2015!
