

Dear Valued Partner,

I do hope that the start of 2015 has been a prosperous one. It has certainly been very eventful at Torin-Sifan.

Thursday 12th of February marked the official opening of our new EC Manufacturing and Technology Centre by both the Mayor and Member of Parliament for Swindon. The event was a very successful occasion celebrated by our staff and our guests from the UK business press. The coverage has been fantastic with Torin-Sifan featuring on two UK TV channels (BBC and ITV) as well as several trade specific publications.

In addition Torin-Sifan has been busy planning the official launch of our new EC Motor platform and this will take place in June 2015. More information on the launch will follow soon.

Below you will find further updates on current Torin-Sifan initiatives.

Best regards,

Paul Kilburn

ECDDC & FCDDC Direct Drive Forward Curved Centrifugal Fan Ranges

Torin-Sifan is pleased to confirm the availability of both EC (Electronically Commutated) & FC (3-Phase Inverter Controlled AC versions) of its widely popular range of Direct Drive, Double Inlet, Forward Curved, Centrifugal range of Fans for Commercial & Industrial applications.

Both ranges offer significant improvements in energy efficiency that make them ideal choices for ensuring compliance with ErP based regulations, including those currently in force and the further tightening of these regulations to follow at defined dates between now and 2020.

The EC range can be fully retrofitted with the traditional AC products ensuring minimum disruption for OEM's, making the fans ideal for refurbishment projects where fan efficiency needs to be upgraded. The FCDDC range is able to offer the benefits of being fully programmable with constant pressure/volume programs being particular popular. Both ranges are available in the traditional Direct Drive sizes from 7-

7 to 15-15.

Eco EC Fandecks

Torin-Sifan launched the first Fandeck product to be made available to the market fitted with EC Motor technology at ISH 2009. Since then the product has proven extremely popular due its ability to meet the demands of energy efficiency regulation across Europe. The product also benefits from infinitely variable speed control, cost efficiency versus standalone EC Blowers due to only one motor being used, quiet operation and compliance with the EMC Directive without the need to fit additional harmonic filtering. Decks can be customer made, prewired and ensure hassle free assembly and operation.

We are now proud to launch our latest generation Eco EC Fandeck. Offering a more compact motor with full on-board electronics, our latest technology has achieved the holy grail of both whisper quiet operation as well as boasting extremely low specific fan powers. The product has been designed to be even more cost effective building on our substantial annual production quantities. The latest design should build on its predecessor's popularity with OEMs and end users alike.

Designed for a variety of applications, the new EC Fandeck is ideal where multiple fans are needed to achieve specified airflows but where space limitations exist, such as fan coil units, fan convector units, air curtains, trench heating and ventilation units.

Celebrating 50 Years of Investment in Air Movement Technology

In 2014 Torin-Sifan achieved the milestone of 50 years of manufacturing within Swindon in the UK. To celebrate this, the business produced a heritage brochure celebrating our history and looking forward to many more years of success.

You can download a copy of the brochure by clicking [this link](#).
